

# Can logins have access to only specific system partitions?

## GoSafer Security Knowledge Base

*This operational reference is organized for GoSafer Security customers and staff. Alarm.com product names are retained where required for technical accuracy.*

## Overview

Access to specific system partitions can be configured using the GoSafer Security customer portal (powered by Alarm.com). The permission to limit access to specific system partitions can be added to existing logins or when creating a new login. Note: If a login is given access to a partition, it only gains control at the partition level. Full control at the system level (e.g., view History or User Code Management) must be granted with separate login permissions. For more information about managing login permissions, see Manage login permissions for secondary logins.

## Procedure

To restrict system partition access for an existing system user

1. Log in to the GoSafer Security customer portal (powered by Alarm.com).
2. Click Users.
3. Click the desired user to be edited.
4. Click Panels.

In Security Panels, click to toggle the desired system partitions for access.

1. Click Save.

## To restrict system partition access for an existing login

1. Log in to the GoSafer Security customer portal (powered by Alarm.com).
2. Click Users.
3. Click Manage Logins.
4. Click the login name to be edited.
5. Click to select Limited Device Access.
6. Click to select Remote Arming.

Using the Remote Arming dropdown menu, select the partitions to be controlled.

1. Click Save.
