

Why are sensors sometimes combined as an open/closed event and sometimes separate in the activity history?

GoSafer Security Knowledge Base

This operational reference is organized for GoSafer Security customers and staff. Alarm.com product names are retained where required for technical accuracy.

Overview

A sensor's Open and Close events typically get combined into one line in the activity history when the events occur within a few minutes of each other. If a sensor is opened and then not closed again for a longer period of time, there will be two separate events in the activity history: one for the sensor being opened and another for the sensor being closed. For more information about configuring Sensor Activity Monitoring for sensors, see [Turn sensor activity monitoring on/off](#).
